

# Predstavenie Oracle Cloud Platform

Gabriela Hečková  
Technology Sales Consultant

## Applications. Platform. Infrastructure.

# Digital Business: Challenging Old Business Models

# Trends Driving Digital Disruption

## Mobile

Open for  
business any  
place, any  
time

## Social

Enables new  
levels of customer  
intimacy

## Big Data

New analytical  
opportunities at a  
massive scale

## Internet of Things

Explosive growth in  
Device to Device  
communication

## Cloud

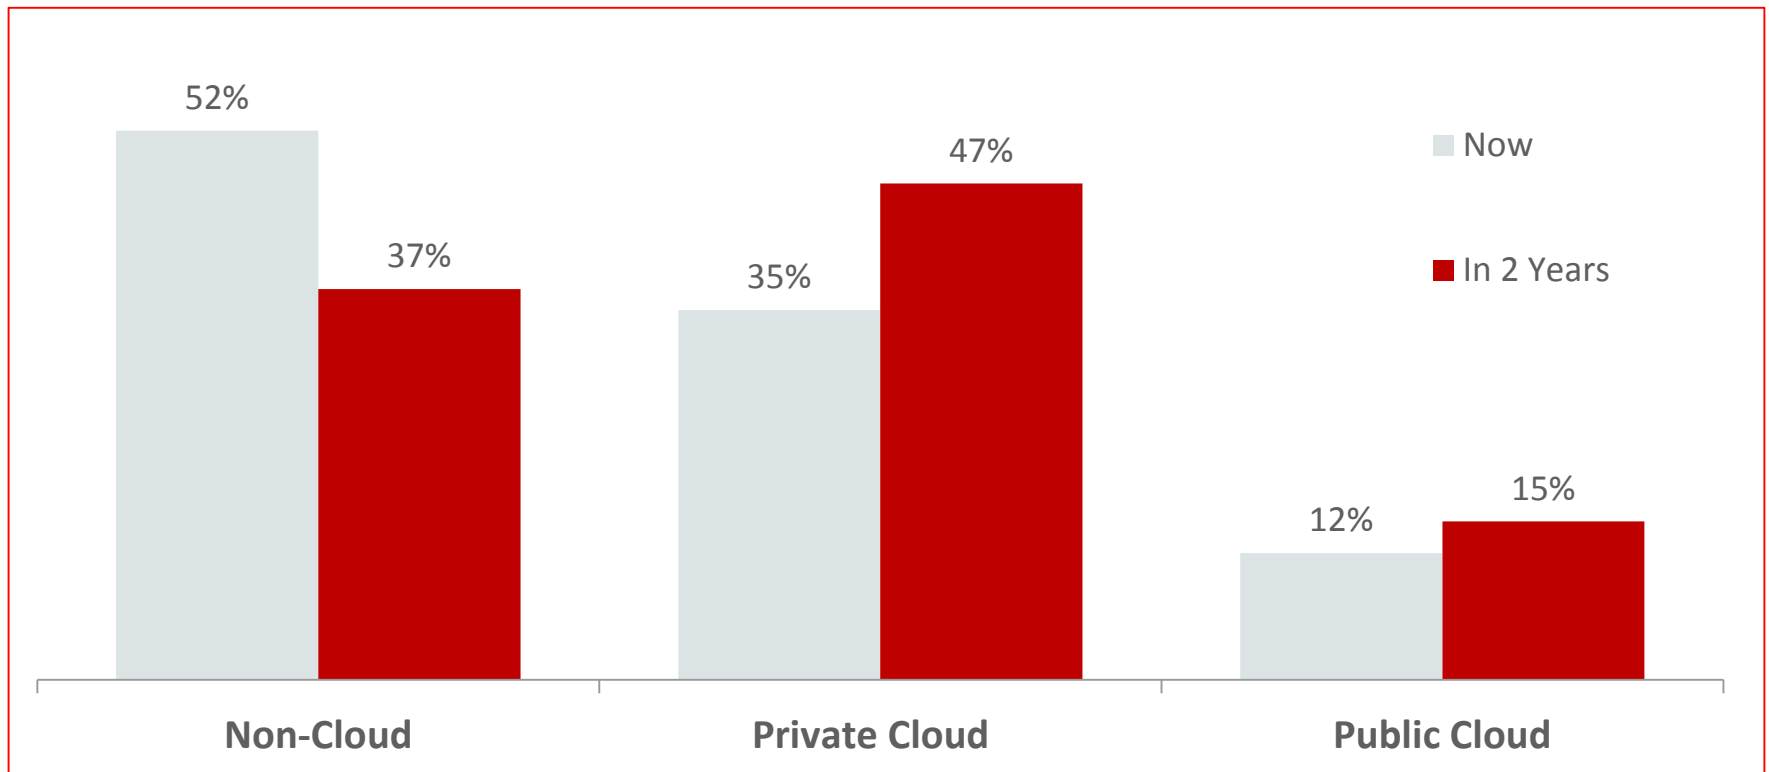

Foundation for  
efficiency and business  
agility

# Workloads Are Moving to Cloud

↓ Traditional compute workloads **decreasing**

↑ Private cloud compute workloads **rapidly** increasing

↑ Public cloud compute workloads are on the **rise**

Source: ComputerWorld & Triangle research study, 2014

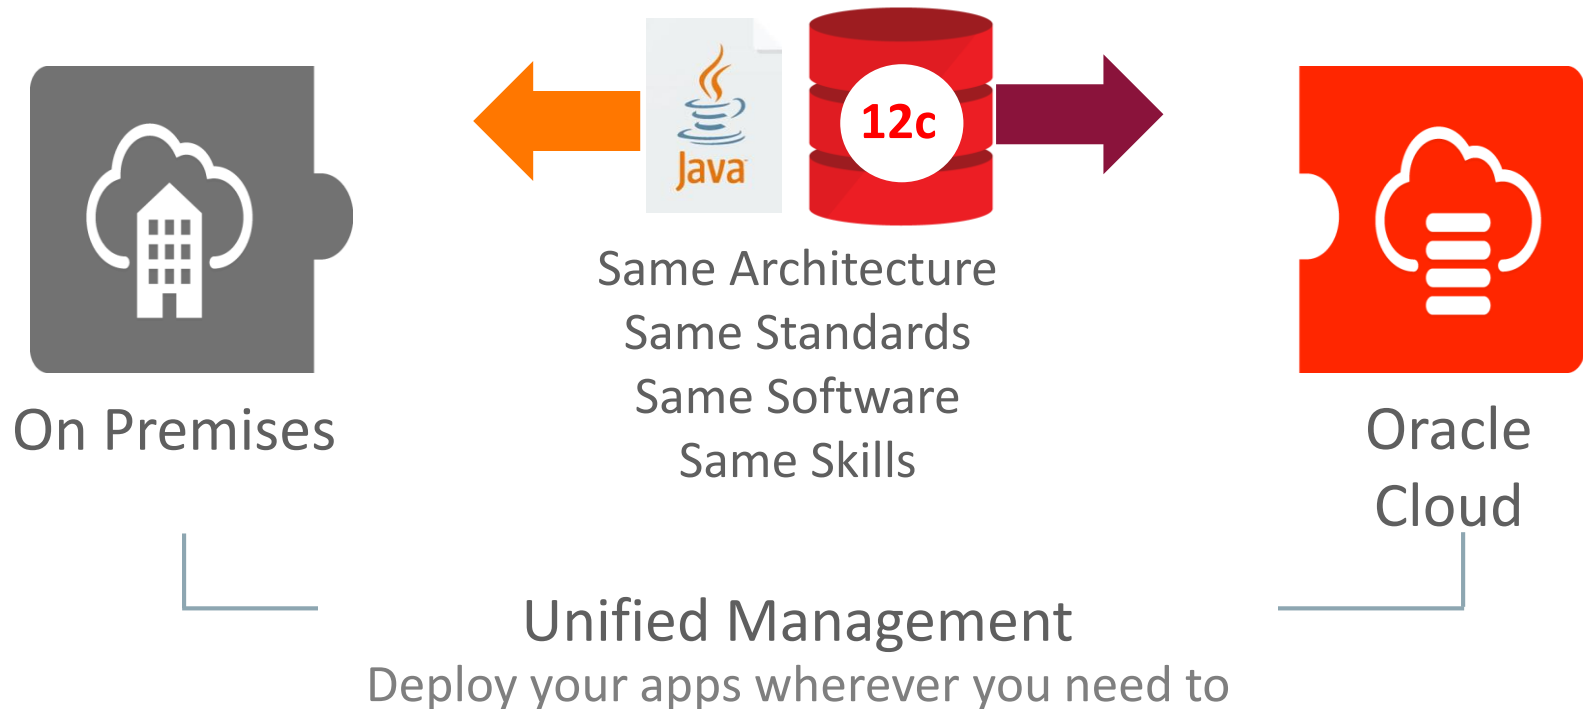

# Oracle Cloud Computing Strategy:

## Complete Solution, Complete Choice

# Oracle Cloud Platform

Full portability between on-premises and cloud

# Private Cloud

# Evolution to PaaS for Database

## Traditional DB Silos

- Physical
- Dedicated & heterogeneous
- Static with disconnected analytics

Siloed

## Standardization

- Standardized hardware and software stack
- Standard deployment configuration
- Catalog of database services and service levels

Simple

## Consolidation

- Shared & secure central data infrastructure
- Dynamic optimizations & resource mgmt
- Automated systems management

Efficient

## Service Delivery

- On-demand, resilient, and tiered self-service
- Rapid service elasticity and automation
- Metering, automated cost allocation & chargeback

Agile

## One Cloud

- Fully dynamic and unified resource pools
- IT as cloud broker: arbitration and brokerage
- Secure hybrid cloud integration (vendors, partners, etc.)

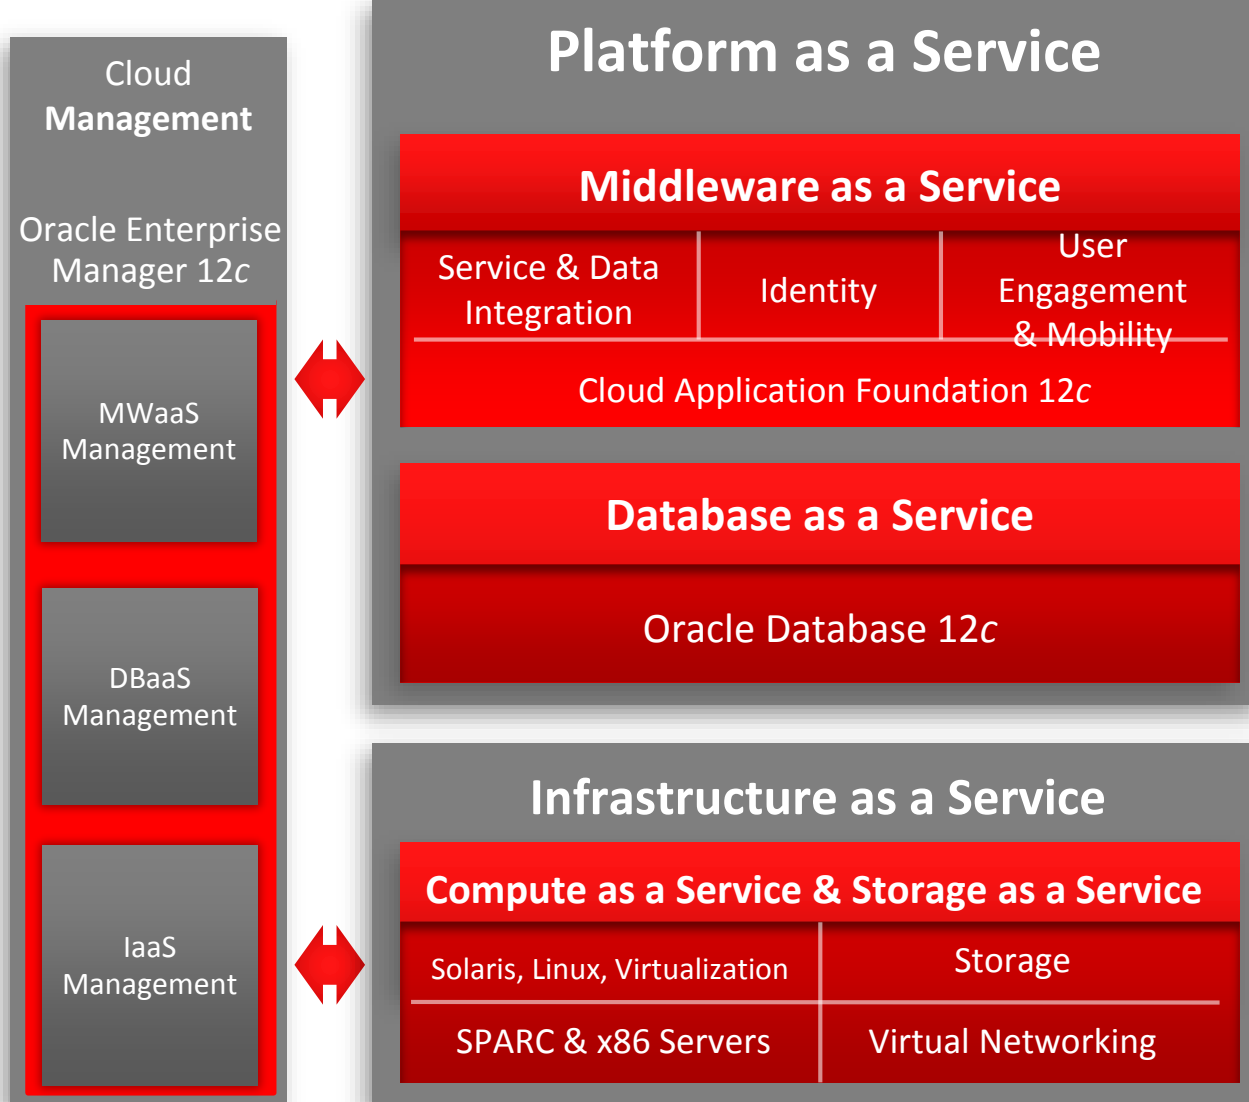

Unified

 Maturity & Capability 

# Oracle Private Cloud Products

## Engineered Systems

# Deliver PaaS via a Lifecycle Approach

## 4. Meter, Charge, Optimize

- Meter resource utilization
- Chargeback/Showback

## 3. Manage & Monitor

- Database monitoring
- Configuration management
- Full stack management

## 1. Plan & Setup the DB Cloud

- Design Service Catalog
- Capacity & consolidation planning
- Asset discovery
- Setup Resource Pools
- Setup Policies

## 2. Enable Self-Service

- Implement Service Catalog
- Enable Service Governance
- Enable integration via APIs

**Hybrid Cloud Management with Oracle Enterprise Manager 12c Cloud Control**

# Standardization: DBaaS Service Catalog

I need a new schema to track our upcoming campaign  
We need the best performance so we can reply in real time

Project Mgr

I need a database for the new HR system

I'm willing to pay for near-continuous availability

Apps IT

I need to copy a production database for testing

The cheapest configuration is fine. This is just for testing

Apps QA

Service Template Name	Description
Full 1.5 TB Database Clone	Full 1.5 TB Database Clone of production database
Generic Application Schema	Generic schema on database 11.2.0.3
HR Sample Schema	Creates the HR sample schema with data.
Small 200 GB database from RMAN ba...	Small clone of database using RMAN backup
StoreFront Application Schema	Schema for the StoreFront Application with seed data on data...

- Service Catalog =  $\sum$  ( **Pre-approved** and **pre-configured** service templates)
- Service Template = db configuration from reference system + definition of desired db (options, init, etc) + data (for cloning scenarios)
- One catalog for multiple users; role based access

# Self-Service Provisioning Oracle Enterprise Manager 12c

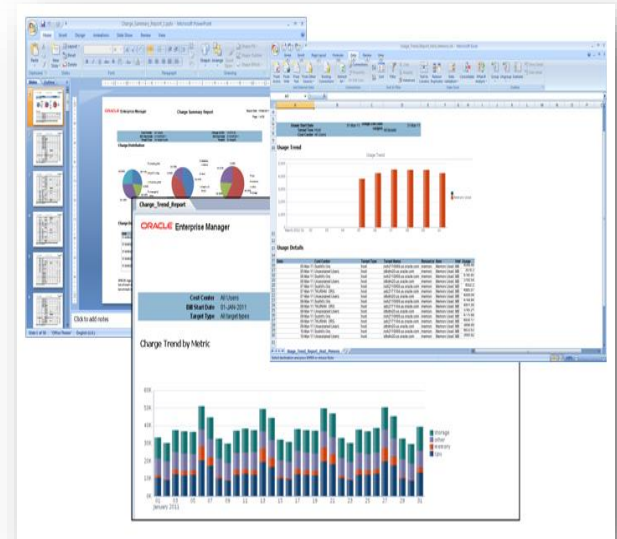

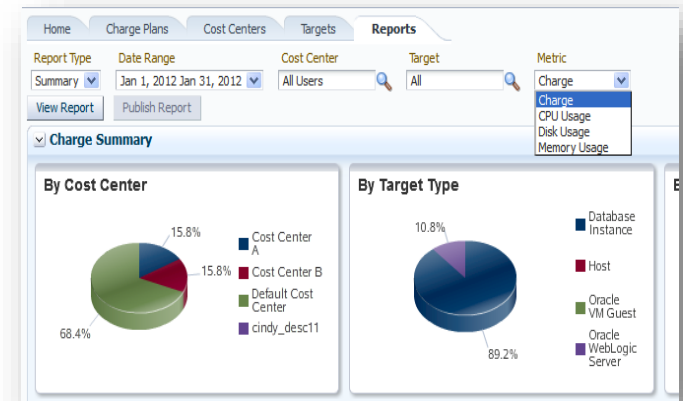

- Comprehensive support for consolidation
  - Dedicated databases, schema, pluggable
- Automated, intelligent placement
  - workload and configuration
- Complete self-service catalog
  - Governance, quotas, policies, showback
- Flexible cloning architecture
  - Full data cloning by leveraging backups
  - Instant database provisioning using “SnapClone”
- Integrated database lifecycle management
  - Monitoring, backup, patching
- API-driven (RESTful and command line)

The screenshot displays the Oracle Database Cloud Self Service Portal. The top navigation bar includes the Oracle logo, user information (JD OE), and a Log Out button. The page title is "Database Cloud Self Service Portal" and it indicates the page was refreshed on Sep 25, 2011, at 5:33:57 PM PDT. The main content area is divided into several sections:

- Home** (selected), **Chargeback**, and **My Preferences** tabs.
- Notifications**: A section titled "Databases Due to Expire in Next 7 Days 2".
- Your Usage**: A section showing cumulative quota allowances. It includes three progress bars:
  - Databases: 4** (0 to 12)
  - Memory: 3.42 GB** (0 to 50)
  - Storage: 1.72 GB** (0 to 100)
- My Databases**: A table listing database instances with columns for Service Name, Type, Status, Zone Name, Start Date, and End Date. The table contains four rows of data.
- My Requests**: A table listing database requests with columns for Request Name, Status, Creation Date, Start Date, and End Date. The table contains four rows of data.

# DBaaS Metering and Chargeback

- **Flexible** metering and chargeback based on:
  - Configuration and monitoring information
  - Host, Database, DB Service, and PDB level
- Automated **rollup** using LDAP hierarchy
- Tailored **reporting** for different user personas
- Extend coverage via **custom** charge items
- **APIs** for integration with billing systems

# Oracle Database Cloud Service

Your strategic database in the cloud

- Self-service database development and deployment platform with advanced cloud tools
- All the power and flexibility of the Oracle Database in the cloud
- Choice of management options, from self-managed to fully-managed by Oracle
- Pre-configured for Java and Business Intelligence Cloud Services

# Oracle Java Cloud Service

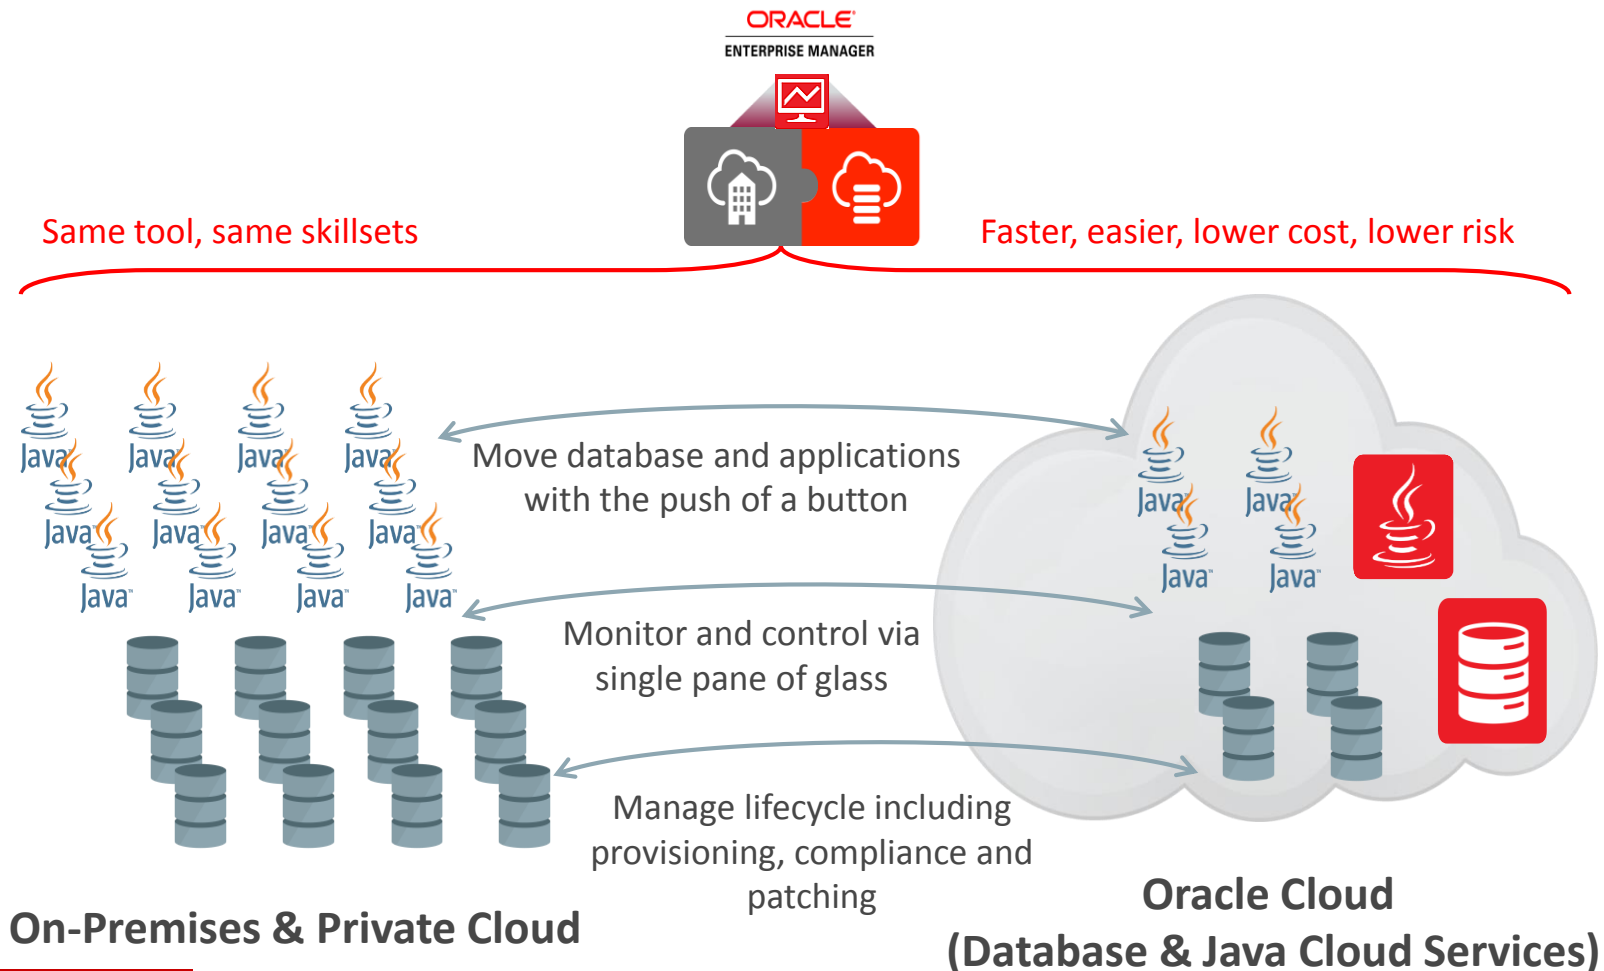

Your platform for running business applications in the cloud

- Self-service application platform with advanced cloud tools
- Increase data and processing capacity on demand to scale for new business needs
- Pre-configured for Database and Developer Cloud Services for complete cloud application management

# Hybrid Cloud Management

## Upgrade, Move and Manage Through a Single Pane of Glass

A red biplane is flying over the Golden Gate Bridge. The word "ORACLE" is written vertically in white on the upper wing of the biplane. The background shows the bridge and the surrounding landscape, all with a reddish tint.

A unified stack, a technology and solution  
continuum...

...spanning applications, premise  
and cloud

For wherever  
you might be  
on your  
journey

**ORACLE®**
